

Category:
A triple $\mathcal{C}(O, M, \bullet)$ where

- $\forall o \in O, \exists id_o \in M$
- \bullet is defined for all connected objects
- $\bullet(A \rightarrow B, B \rightarrow C) = A \rightarrow C$
- $(f \bullet g) \bullet h = f \bullet (h \bullet g)$
- $id_x \bullet f = f \bullet id_y$

Free Monoid:
A free monoid of M is just a monoid $\mathcal{M}(List[M], [], ++)$.

Free Monoid:
A free monoid of M is just a monoid $\mathcal{M}(List[M], [], ++)$.

Action:
An action of a $\mathcal{M}(M, id_0, \star)$ over a set S of states is a function

$$M \times S \rightarrow S$$

It is equivalent to an automata
